SUMMARY

FinOps & Data Engineer with nearly 3 years of experience architecting enterprise-grade Cloud Cost Management platforms. Expert in **Cost Allocation, Showback/Chargeback models**, and Budget Forecasting across Multi-Cloud environments (GCP, AWS, Azure). Proven track record of driving \$15M+ in annualized savings by designing and engineering custom tooling for anomaly detection and resource rightsizing. Deep technical proficiency in SQL, PySpark, and transforming complex Billing Data into actionable financial insights.

TECHNICAL SKILLS

FinOps & Cloud Cost: Cost Allocation Models, Chargeback/Showback, GCP Billing Exports, AWS Cost & Usage Reports (CUR), Tagging Strategies, Anomaly Detection.

Tooling & BI: dbt (Data Build Tool), Streamlit, Custom FinOps Dashboards, OTBI, SQL, Python.

Data Engineering: Data Modeling (Medallion Architecture), Apache Spark, Airflow, BigQuery, Databricks, ETL Pipelines.

Infrastructure: GCP, AWS, Azure, Kubernetes

EXPERIENCE

Motorola Solutions

July 2025 – Present

Data Engineer (FinOps & AI)

Bangalore, India

- **Financial Modelling & Chargeback:** Architected a custom **Multi-Cloud Chargeback Platform** to allocate shared 13 custom environments compute costs to tenant business units. Achieved 99.9% cost allocation accuracy, enabling precise showback reports for distributed teams.
- **Margin Impact & Optimization:** Engineered an Azure telemetry pipeline to track K8s pod utilization (CPU, IOPS), driving a strategic initiative to convert on-demand compute to spot/reserved instances, targeting a 10-15% reduction in non-optimized spend and a 1% overall margin improvement.
- Leveraged cloud **recommendation exports** to build a centralized optimization engine, identifying potential savings by aggregating rightsizing metrics and idle resource data (e.g., detached volumes, underutilized VMs) into actionable dashboards.
- **Billing Data Analysis:** Engineered ETL pipelines using Python (PySpark) and SQL to ingest raw Billing Exports and Prometheus metrics, transforming complex usage data into unified BI dashboards for leadership reporting.
- **Anomaly Detection:** Developed a Python-based algorithmic auditing feature to monitor daily cloud spend trends, reducing false positive budget alerts by 40% and preventing revenue leakage.
- **Governance & Tagging:** Established a Tagging Governance Framework to ensure 100% resource attribution, working with engineering teams to enforce mandatory cost-center tags via pipelines.
- **GenAI Asset Management & ROI:** Architected 'AiHub' data pipelines and business intelligence dashboards aggregating telemetry across multi-vendor AI tools (Cursor, Claude, Gemini, GitHub Copilot) and VCS systems (GitHub, Bitbucket, Gerrit); engineered enterprise adoption and productivity metrics to calculate true ROI and optimize software licensing spend.
- **Stakeholder Collaboration:** Partnered with cross-functional engineering and finance leadership to establish showback cadences, driving the actual implementation of the \$15M+ identified discount & rightsizing opportunities.

Mastek

Jan 2024 – July 2025

Associate Consultant (Data & GenAI)

Ahmedabad, India

- Developed a P2P (Procure-to-Pay) compliance algorithm in SQL/PLSQL that identified **£645k+** in early-receipting risks and **£214k** in unbilled spend for a major public sector client.
- Spearheaded the R&D of 'SQLator', a **Text-to-SQL** Generative AI tool using **LangChain** and **Neo4j GraphRAG**, enabling non-technical stakeholders to query complex Oracle Finance schemas via natural language.
- Designed and deployed **Oracle APEX** dashboards to visualize OEE (Overall Equipment Effectiveness) metrics across three manufacturing plants, integrating IoT data streams to minimize production downtime.
- Automated the ETL process for "Certificate of Analysis" generation, reducing manual reporting effort by **90%** through dynamic SQL templating and stored procedures.

Jio Platforms Ltd.

May 2023 – July 2023

Data Engineering Intern (Observability)

Mumbai, India

- Processed high-volume system logs using **Splunk** (SPL), building real-time dashboards to monitor distributed system health and API error rates.
- Developed Python scripts to parse unstructured log data into structured formats for downstream anomaly analysis.

KEY PROJECTS

FinOps MCP Agent: Autonomous Cloud Cost Analyst | *MCP, A2A Protocol, Vertex AI, BigQuery, React* | [GitHub](#)

- **Architected a custom agentic ReAct loop from scratch** orchestrating **Gemini 2.5 Pro** (Vertex AI) with **4 specialized MCP servers** (BigQuery, SQL Server, Analytics, File I/O), implementing dynamic **tool routing** across 25+ tools and **parallel cross-server execution** to minimize latency on multi-source FinOps queries.
- **Engineered multi-cloud cost analysis** (AWS, Azure, GCP) with SQL injection guardrails, scope enforcement, and a **Human-in-the-Loop** dry-run cost gate. Built **anomaly detection** (Z-score, IQR) and **time-series forecasting** (linear regression, EMA) capabilities, served via a **React + SSE streaming** frontend with interactive elicitation controls.
- **Implemented Google's A2A (Agent-to-Agent) protocol** to expose the agent as a discoverable sub-agent via JSON-RPC and Agent Card, enabling autonomous task delegation from a master orchestrator. Added structured **token-level observability** with Pydantic trace models and context window management for production reliability.

EDUCATION

Charotar University of Science & Technology

May 2024

Bachelor of Technology in Computer Engineering

CGPA: 9.79 / 10.0

ACHIEVEMENTS & CERTIFICATIONS

Certifications:

- EAG V3: Exhaustive Agentic AI by The School of AI (ongoing), MCP, A2A, Multi-Agent DAG, Browser/Desktop Agents, Observability
- FinOps Foundation: Introduction to FinOps
- Apache Airflow 3 Fundamentals (Astronomer)
- Oracle Cloud GenAI Professional

Events:

- **Speaker**, [MCP Dev Summit Mumbai 2026](#) (Linux Foundation), "Agentic DX: Bringing Your IDP into the IDE" (Motorola Solutions)
- **State-Level Winner**, Azadi Ka Amrit Mohotsav Hackathon

Awards: "People First Growth Award" (Motorola Solutions), "The Dream Team" & "A True Ideator" (Mastek).
